Six Students from Mitchell Technical Institute Selected as Siemens Technical Scholars for Outstanding Performance and Leadership in STEM Fields

The 2018- 2019 Siemens Technical Scholars Class Includes 44 Students from Across the Country Who Are Preparing for High-Demand, Skilled Jobs in Advanced Manufacturing, Energy, Healthcare, and Information Technology

Washington, DC, September 24, 2018 – The Aspen Institute and the Siemens Foundation have named six students of Mitchell Technical Institute as 2018-2019 Siemens Technical Scholars. The prestigious Siemens Technical Scholars awards recognize an exceptional group of diverse students from across the country who demonstrates the rewarding careers and opportunities that result from completing excellent STEM programs. This cycle’s 44 Scholars will go on to serve as ambassadors for their programs and their respective fields.

The Siemens Technical Scholars are chosen by The Aspen Institute in partnership with the community colleges that win the Siemens-Aspen Community College STEM Award. The 43 programs honored since the awards launched in 2015 do an exceptional job launching students directly into technical careers with wages that enable them to support a family. These colleges partner with employers to offer students in-demand credentials and teach the necessary skills with rigor.

“In the digital economy, going to college and the American dream are more tightly linked than ever before,” said Barbara Humpton, CEO of Siemens USA and chair of the

Siemens Foundation. “And in this unique moment, one of the smartest choices someone can make is to pursue technical education through a community college.”

Mitchell Technical Institute’s Power Line Construction & Maintenance program was awarded \$25,000 to support scholarships for the following Siemens Technical Scholars:

- Nicholas Hoelzel
- Cole Anderson
- Cody Harvey
- Tucker Hohn
- Quintin Bradford
- Isaac McAlister

A flagship program for Mitchell Technical Institute, Power Line Construction & Maintenance program was honored for consistently high enrollment, retention, post-graduation earnings, and industry support throughout South Dakota and beyond. The program is rigorously guided by the power line industry and leaders maintain strong relationships with alumni. Among other strong practices, the program employs a diversity coach who addresses the challenges of students who are non-traditional in areas of gender, age, or ethnicity.

In the coming years, demand for STEM skills will continue to grow. Some estimates show as many as 26 million jobs in the United States will require significant STEM knowledge, representing nearly 20 percent of all U.S. jobs. Employers are having trouble finding qualified people to fill these spots. Pursing an in-demand, technical STEM career like those the Siemens Technical Scholars have selected—in health care, energy, information technology, and advanced manufacturing—is an impactful way for Americans to achieve economic mobility. More than half of STEM jobs across the United States require only an associate degree and pay, on average, more than \$50,000 a year.

“Too often, we fail to connect the incredible talent in communities with the rewarding careers available right now,” said Josh Wyner, executive director of the College Excellence Program at the Aspen Institute. “The exceptional and diverse 2019 class of Siemens Technical Scholars embody those connections. Their hard work in excellent community college programs has not just launched them on strong careers but serves as a model for how America can develop the talent it needs to continue to grow economically.”

The Aspen College Excellence Program aims to advance higher education practices, policies, and leadership that significantly improve student outcomes. Through the Aspen Prize for Community College Excellence, the Siemens Technical Scholars Program, and other initiatives, the College Excellence Program works to improve colleges’ understanding and capacity to teach and graduate students, especially the growing population of low-income and minority students on American campuses. The Aspen Institute is an educational and policy studies organization based in Washington, D.C. Its mission is to foster leadership based on enduring values and to provide a nonpartisan venue for dealing with critical issues. The Institute is based in Washington, D.C.; Aspen, Colorado; and on the Wye River on Maryland's Eastern Shore. It also has offices in New York City and an international network of partners. For more information, visit www.aspeninstitute.org.

The Siemens Foundation has invested more than \$115 million in the United States to advance workforce development and education initiatives in science, technology, engineering and math. The Siemens Foundation's mission is inspired by the culture of innovation, research, and continuous learning that is the hallmark of Siemens' companies. Together, the programs at the Siemens Foundation are closing the opportunity gap for young people in the United States when it comes to STEM careers and igniting and sustaining today's STEM workforce and tomorrow's scientists and engineers.
